

# ICDP Report 2018 - 2019

At “University College UCN act2learn” we have been training in the ICDP programme large numbers of professionals on a continuous basis.

We have open courses at our own facilities in Aalborg, but we also travel to different municipalities around Denmark where groups of staff leaders are trained in order to support the implementation of ICDP.

ICDP is well known in most of the pedagogical sector in Denmark, and especially in the daycares for children 0-6 years of age. The good news is also that the school-sector is showing an increasing interest in working with ICDP.

*The photo above: Facilitators who use the ICDP programme by working with groups of parents. The course has made an important difference for the parents and their children.*

In 2018 -2019 we have trained different groups: foster care families, teachers, social-workers, health care workers and especially pedagogues. In addition to training at caregiver and facilitator levels, we are forming professionals at trainer level, which qualifies them to train others in ICDP in their own municipalities.

One of our future aims is to work with social services for older people. In the past we have educated staff working with senior citizens, and we hope to do more of that in the future.

During 2019 and continuing in 2020, our priority is to conduct research on ICDP in order to find out about the effects and outcomes of applying the ICDP programme.
